Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "the perimeter opening of the second fitment apparatus is not equal to the perimeter of the opening of the first fitment apparatus" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Jones (US 4,635,814). Regarding claims 8-10, see Figs. 1 and 3-6 where the claimed structure is shown. 13 is the interface where the interface is detachably secured to the container.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jones (US 4,635,814) in view of Voorhies (US 4,930,661). Regarding claim 18, Jones does not teach the fitments having a different outer perimeter. Voorhies as seen in Fig. 1 and 4, teaches a similar container where the perimeter diameter of the two fitments are different. It would have been obvious to employ fitments of different diameter to provide a larger opening for more rapid filling. Regarding claims 18-20, the method steps do not require any structure that is not in the combination of references. Moreover, the specification does not disclose that it is critical that the steps be preformed in a specific order. It would have been obvious to employ the steps in any particular order to assemble the container as desired.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Linnemann, Walker, McFarlin et al, Vom Hofe et al, and Butler are all cited for teaching containers with fitments.
